What Deaths Do We Investigate?

The Michigan Compiled Laws (MCL) 52.202 require the County Medical Examiner or Deputy County Medical Examiner to investigate the cause and manner of death of an individual under each of the following circumstances:

- The individual dies by violence.
- The individual's death is unexpected.
- The individual dies without medical attendance by a physician, or the individual dies while under home hospice care without medical attendance by a physician or a registered nurse during the 48 hours immediately preceding the time of death, unless the attending physician, if any, is able to accurately determine the cause of death.
- The individual dies as the result of an abortion, whether self-induced or otherwise.
- If a prisoner in a county or city jail dies while imprisoned, the County Medical Examiner or the Deputy County Medical Examiner, upon notification of the death of the prisoner, shall examine the body of the deceased prisoner.

We also consider the National Association of Medical Examiners (NAME) standards in deciding which deaths to investigate, which include:

- Deaths due to violence.
- Known or suspected non-natural deaths.
- Unexpected or unexplained deaths when in apparent good health.
- Unexpected or unexplained deaths of infants and children.
- Deaths occurring under unusual or suspicious circumstances.
- Deaths of persons in custody.
- Deaths known or suspected to be caused by diseases constituting a threat to public health.
- Deaths of persons not under the care of a physician.

Identification of Decedent

In Michigan, MCL 52.205 requires a scientific identification in cases where visual identification of a decedent is impossible as a result of burns, decomposition, or other disfiguring injuries or the death is the result of an accident that involved two or more individuals who were approximately the same age, sex, height, weight, eye color, hair color, and race. In these cases, the County Medical Examiner is required to verify the identity of the decedent through fingerprints, dental records, DNA, or another definitive identification procedure.

Indications for Complete Autopsy

The decision regarding whether a complete autopsy should be performed is based on the NAME autopsy performance standards. Consequently, an autopsy is performed when the:

- Death is known or suspected to have been caused by apparent criminal violence.
- Death is unexpected and unexplained in an infant or child.
- Death is associated with police action.
- Death is apparently non-natural and in custody of a local, state, or federal institution.
- Death is due to acute workplace injury.
- Death is caused by apparent electrocution.
- Death is by apparent intoxication by alcohol, drugs, or poison, unless a significant interval has passed, and the medical findings and absence of trauma are well documented.
- Death is caused by an unwitnessed or suspected drowning.
- Body is unidentified and the autopsy may aid in identification.
- Body is skeletonized.
- Body is charred.
- Forensic Pathologist deems a forensic autopsy is necessary to determine cause and/or manner of death, or document injuries/disease, or collect evidence.
- Deceased is involved in a motor vehicle incident and an autopsy is necessary to document injuries and/or determine the cause of death.

What is the difference between Cause of Death & Manner of Death?

The **cause of death** is (a) the disease or injury that initiated the train of morbid events leading directly to death, or (b) the circumstances of the accident or violence that produced fatal injury.

Manner of death determination is something that originated in the United States. Unlike the cause of death, with thousands of possibilities, in Michigan, manner of death is limited to: Natural, Suicide, Accident, Homicide, and Indeterminate. The fundamental purpose for determining the manner of death is for public health surveillance and vital statistics.

- **Natural** deaths are due solely or nearly totally to disease an/or the aging process.
- **Accident** applies when an injury or poisoning (such as a drug overdose) causes death and there is little or no evidence that the injury or poisoning occurred with intent to harm or cause death. In essence, the fatal outcome was unintentional.
- **Suicide** results from an injury or poisoning as a result of an intentional, self-inflicted act.
- **Homicide** occurs when the death results from a volitional act committed by another person to cause harm, fear, or death. Intent to cause death is a common element but is not required for the classification as a homicide. It has to be emphasized that the classification of homicide for the purpose of death certification is a “neutral” term and neither indicates nor implies criminal intent, which remains a determination within the province of legal processes.

- **Indeterminate** is a classification used when the information pointing to one manner of death is no more compelling than one or more other competing manners of death, in thorough consideration of all available information.

In general, when death involves a combination of natural processes and external factors, such as injury or poisoning, preference is given to the non-natural manner of death.

The Death Investigation Process

A Medical Examiner Investigator (MEI) responds to nearly all death scenes. The MEI is trained to recognize the vast majority of the deaths requiring postmortem examinations and, in those cases, immediately arranges for transport to WMed for a postmortem examination. Homicides, infant deaths, and drug overdoses are examples of the deaths that are immediately sent.

If the death does not appear to meet the requirements for a postmortem examination, the MEI contacts the on-call Medical Examiner to discuss the case before releasing the body to a funeral home. The MEI writes a report documenting their findings and uploads images obtained at the investigation site. These reports and photos are reviewed by the Medical Examiner or Deputy Medical Examiner.

The Medical Examiner or a Deputy Medical Examiner is assigned to each case and generally uses one of the following approaches in each of the deaths for which our office is responsible:

- **Declined Jurisdiction:** A reported death classified as an attended natural death should be documented as a Declined Jurisdiction case. Jurisdiction is declined when the death does not meet the required reporting criteria per Michigan statutes.
- **Direct release:** The body is released directly from the scene to the funeral home. The MEI at the scene views the body and collects information on the scene, such as medical history, and social history. This information is provided to the on-call Medical Examiner who may decide to release a body directly to the funeral home chosen by the family.
- **Storage:** The body will be taken to WMed for temporary storage until a funeral home has been chosen. If family cannot be found or if the family does not take responsibility for the disposition of the remains, an unclaimed remains process ensues.
- **External Examination:** An external examination includes a careful evaluation of the circumstances of the death and an examination of the external surfaces of the body, with possible laboratory/toxicology testing.
- **Limited Examination:** A limited examination generally is with an anatomic boundary (such as a brain only examination) to recover a foreign body or to answer specific questions. This type of examination may also include toxicology testing. This type of exam is rare and only used in special circumstances.
- **Complete Autopsy:** A complete examination includes external and internal examination, with toxicology.

Cremation Permit Authorizations

MCL 52.210 requires funeral directors and embalmers to obtain a signed permit from the Medical Examiner for the county in which the death occurred. Our office reviews thousands of cremation permit requests each year. The requests for authorization to cremate involve reviewing the death certificate provided by the funeral director to ascertain that deaths that should have been reported to our office were, in fact, reported. Deaths that were not properly reported are investigated before cremation is authorized. We provide monthly detailed reports to the counties that charge for cremation permits to allow them to send invoices, as needed.

Public Health and Safety

The major purpose of the Medical Examiner's Office is to conduct death investigations. The information obtained from individual death investigations may also be studied collectively to gather information that may be used to address public health and safety issues. Our office participates with the Child Death Review Team in all counties, providing significant information regarding how children died with the goal of preventing future deaths.

With funding from the Michigan Department of Health and Human Services (MDHHS), our team grew in 2020 to include a Drug Fatality and Surveillance Analyst specifically to assist with tackling the evolving opioid epidemic. This has involved increased surveillance of all drug-related deaths and more detailed death certification in these types of cases across each county we serve. Our team worked with MDHHS, the Michigan Public Health Institute (MPHI), and multiple counties to progress legislation for the creation and confidentiality protections for Overdose Fatality Review Teams across the state. This bill was signed by the Governor and went into effect in early 2024.

With funding from the Council of State and Territorial Epidemiologists and the Centers for Disease Control and Prevention (CDC), our team grew to include a Public Health Project Coordinator that has been working to better assess respiratory infections in the communities we serve, specifically that of deceased individuals. This surveillance has been crucial throughout the COVID-19 pandemic and has helped to inform public health agencies across the state and the U.S. This project began in late 2020 and has been re-funded multiple times.

With continued funding from MDHHS, our office has established multiple Elder Death Review Teams throughout the counties that we serve. This team coordinates with outside agencies, including the Michigan Department of Licensing and Regulatory Affairs (LARA), to systematically review elder and vulnerable adult deaths to identify gaps in reporting, communication, and improve death investigations in this population. These teams also identify trends and opportunities for the prevention of premature death. Currently, these teams exist in eight of the counties we serve, with plans for continued expansion.

Unclaimed Investigations

When a death occurs, there is not always someone available who is willing and able to claim the decedent and arrange for final disposition with a funeral director. The process varies with whether the decedent had resources to cover the cost of final disposition. If not, our staff members work with MDHHS and area funeral directors to have the decedent cremated. As the process results in an accumulation of unclaimed cremains, we began collaborating with St. Martin of Tours Episcopal Church in Kalamazoo, Michigan in 2019 to bury the cremains. The names of each of the decedents buried in small coffins on the grounds of the church are located on plaques on the outside of the church. This collaboration includes an annual memorial event, which briefly paused due to the COVID-19 pandemic, but has resumed to provide a peaceful, respectful disposition of remains.

Terms

- “MEI Scene Investigations” are those reported deaths for which an MEI went to the death scene.
- “Deaths Investigated” include MEI Scene Investigations as well as reported deaths that, while may not allow for a scene investigation, involved an investigation beyond the initial report of the death, usually in the form of a records review in response to information provided as part of a cremation request.
- The category “Referrals to Gift of Life” does not include in-hospital deaths reported to the Medical Examiner’s Office, which are referred to Gift of Life by hospital staff rather than the Medical Examiner’s Office.
- For “Accidental Deaths,” the subcategory “Vehicle” consists of deaths that were classified as transportation-related fatalities and includes all forms of transport; drivers/operators, passengers and pedestrians; and types of death that might otherwise fall into a different sub-classification, such as vehicle fires and traumatic asphyxia.
- “Drug-related Deaths” specifically refer to deaths that are directly caused by an acute or mixed drug intoxication or in situations where drug intoxications directly impact or exacerbate existing medical conditions causing death.

Important Note

The data reflects the county where the individual was pronounced dead rather than the county of residence or the county in which the incident leading to death might have occurred. If a motor vehicle collision occurs in County A, and an individual injured in the collision is transported to and eventually reported death in County B, the death is reported to the Medical Examiner of County B. Consequently, counties with major medical centers typically have a much higher number of deaths with injuries that may have occurred in another county.

Additionally, there are limitations to the data presented in this report. For example, the sex provided is what is reported to our office at the time of the death. At times, this is not accurate or representative of what the decedent may have identified as. Our office continues to work diligently to provide the most accurate information about and to the communities that we serve.

[1] (1) Found deceased at home in advanced stage of decomposition, cause and manner of death could not be determined; (1) Found deceased outdoors in advanced stage of decomposition, cause and manner of death could not be determined

[2] Does not include (1) partially skeletonized remains, likely portion of anatomical specimen

[3] All stillbirths and spontaneous abortions (miscarriages) investigated but not requiring an examination have been removed from this table for a more accurate representation of deaths reported under the age of one year

Pediatric Deaths

The five deaths of individuals under 18 years of age include:

1. 6-10 years old
 - a. (1) Blunt force injuries, bicyclist struck by tractor; accident
 - b. (1) Shotgun wound of abdomen; homicide
2. 11-17 years old
 - a. (1) Multiple blunt force injuries, driver of motor vehicle that struck a tree; suicide
 - b. (1) Shotgun wound of head; suicide
 - c. (1) Multiple shotgun wounds; homicide

[1] (1) Cardiovascular disease, found partially submerged, could not rule out a component of drowning; (1) Acute drug intoxication associated with natural disease and a recent collapse following use of conducted energy device; (1) Acute drug intoxication; (2) Mixed drug intoxication associated with significant natural disease and possible assault; (3) Thermal injuries and inhalation of products of combustion, structure fire; (4) Unexplained sudden death associated with unsafe sleep; (1) Unexplained sudden death associated with unsafe sleep and infection; (1) Found deceased at home in advanced stage of decomposition, cause and manner of death could not be determined

[2] Does not include (1) stillbirth investigation

[3] All stillbirths and spontaneous abortions (miscarriages) investigated but not requiring an examination have been removed from this table for a more accurate representation of deaths reported under the age of one year

Pediatric Deaths

The 17 deaths of individuals under 18 years of age include:

1. <1 year old
 - a. (4) Unexplained sudden death associated with unsafe sleep; indeterminate
 - b. (3) Extreme prematurity; natural (no postmortem exam performed)
 - c. (1) Unexplained sudden death associated with unsafe sleep and infection; indeterminate
 - d. (1) Positional asphyxia, wedged between bed and fixed object; accident
2. 1-5 years old
 - a. (2) Thermal injuries and inhalation of products of combustion, structure fire; indeterminate
3. 6-10 years old
 - a. (1) Asthma exacerbation; natural
4. 11-17 years old
 - a. (1) Hanging; suicide
 - b. (1) Acute drug intoxication; suicide
 - c. (1) Gunshot wound of head; suicide
 - d. (1) Gunshot wound of face; homicide
 - e. (1) Gunshot wound of arm and axilla; homicide

[1] (1) Complications of blunt force injuries of unknown etiology in association with extensive natural disease; (1) Cardiovascular disease associated with deep pressure ulcer, could not rule out neglect/abuse; (1) Complications of cardiovascular disease, circumstances surrounding death unknown; (1) Multiple blunt force injuries, driver in motor vehicle collision with fixed object; (1) Unexplained sudden death associated with unsafe sleep; (1) Found unresponsive in park and play, cause and manner could not be determined; (1) Found deceased at home in advanced stage of decomposition, cause and manner of death could not be determined; (1) Metastatic cancer associated with elevated drug levels of uncertain etiology; (1) Encephalopathy due to hypoglycemia of unknown etiology

[2] Does not include (6) stillbirth investigations

[3] All stillbirths and spontaneous abortions (miscarriages) investigated but not requiring an examination have been removed from this table for a more accurate representation of deaths reported under the age of one year

Grand Traverse County

Pediatric Deaths

The six deaths of individuals under 18 years of age include:

1. <1 year old
 - a. (2) Extreme prematurity; natural (no postmortem exam performed)
 - b. (1) Unexplained sudden death associated with unsafe sleep; indeterminate
2. 1-5 years
 - a. Found unresponsive in pack and play, cause of death could not be determined; indeterminate
3. 6-10 years
 - a. Sudden cardiac death due to congenital disorder; natural
4. 11-17 years
 - a. Multiple blunt force injuries, helmeted dirt bike rider involved in collision with another dirt bike; accident

[1] Complications of dislocated hip, neglect could not be excluded; (1) Mixed drug intoxication; (1) Blunt force injuries, pedestrian versus motor vehicle; (1) Complications of cancer and chronic alcoholism, neglect could not be excluded; (1) Found unresponsive at home, cause and manner of death could not be determined; (1) Unexplained sudden death associated with complications of spina bifida and unsafe sleep; (1) Found partially submerged in water, cause and manner of death could not be determined; (1) Found deceased outdoors in advanced stage of decomposition, cause and manner of death could not be determined; (1) Found unresponsive in vehicle, cause and manner of death could not be determined; (1) Status epilepticus, unknown etiology

[2] Does not include (3) stillbirth investigations; (2) Non-human remains

[3] All stillbirths and spontaneous abortions (miscarriages) investigated but not requiring an examination have been removed from this table for a more accurate representation of deaths reported under the age of one year

Kalamazoo County

Pediatric Deaths

The 24 deaths of individuals under 18 years of age include:

1. <1 year old
 - a. (1) Extreme prematurity; natural (no postmortem exam performed)
 - b. (1) Mechanical asphyxia, wedged between couch and adult; homicide
 - c. (1) Pneumonia due to coronavirus KHKU1 infection; natural
 - d. (1) Unexplained sudden death associated with complications of spina bifida and unsafe sleep; indeterminate
2. 1-5 years
 - a. (1) Acute myeloid leukemia; natural (no postmortem exam performed)
 - b. (1) Complications of ulcerative colitis; natural (no postmortem exam performed)
 - c. (1) Asphyxia due to neck ligature, slipped in car seat securing strap around neck; accident (no postmortem exam performed)
 - d. (1) Drowning, swimming pool; accident
 - e. (1) Blunt force injuries; homicide
 - f. (1) Thermal injuries and inhalation of products of combustion, structure fire; accident
 - g. (1) Blunt head injury, restrained rear seat passenger in motor vehicle collision; accident
 - h. (1) Complications of hydranencephaly; natural
 - i. (1) Found unresponsive at home, cause and manner of death could not be determined
3. 6-10 years
 - a. (1) Blunt force trauma of head/neck, struck by softball; accident
 - b. (1) Thermal injuries and inhalation of products of combustion, structure fire; accident
4. 11-17 years
 - a. (1) Complications of traumatic asphyxia, pinned beneath vehicle; accident
 - b. (1) Complications of congenital heart disease; natural
 - c. (1) Malrotation with volvulus of small intestine; natural
 - d. (1) Multiple gunshot wounds; homicide
 - e. (1) Gunshot wound of neck; homicide
 - f. (1) Multiple blunt force injuries, passenger in motor vehicle collision with fixed objects; accident
 - g. (1) Multiple injuries, unrestrained passenger in motor vehicle collision with another vehicle; accident
 - h. (1) Blunt force injuries, pedestrian versus motor vehicle; accident

Pediatric Deaths

The three deaths of individuals under 18 years of age include:

1. 11-17 years
 - a. (2) Gunshot wound of head; suicide
 - b. (1) Intraoral shotgun wound; suicide

[1] (3) Inhalation of products of combustion, structure fire

[2] All stillbirths and spontaneous abortions (miscarriages) investigated but not requiring an examination have been removed from this table for a more accurate representation of deaths reported under the age of one year

Division of Neuropathology

The Division of Neuropathology, led by Division Chief, Dr. Amanda Fisher-Hubbard, performs a wide range of examinations, including those of forensic cases from WMed and outside institutions/medical examiner offices, private examinations for inquiring families, hospital consultations, and is involved in several research projects. Since 2016, the Division of Neuropathology at WMed has partnered with the Lieber Institute for Brain Development located in Baltimore, Maryland.

Additional Services & Statistics

Forensic Anthropology

Forensic Anthropology services are provided to all WMed Medical Examiner counties led by board-certified forensic anthropologists, Drs. Jered Cornelison and Christine Pink. These services include human versus non-human bone identification; search and recovery of remains; comparative medical and dental radiography for the positive identification of remains; complete skeletal analyses, including trauma reconstruction and analysis and determination of biological sex, age, ancestry, stature; and input and case management of unidentified individuals in the National Missing and Unidentified Persons System (NamUs). The team of forensic anthropologists at WMed also assists in the coordination of all scientific identification via multiple corresponding factors. In 2022, our team grew with the addition of a two-year post-doctoral fellowship program, which was filled by Dr. Jessica Juarez.

	Comparative Medical Radiography	Comparative Dental Radiography	Fingerprint Analysis	Multiple Corresponding Factors	DNA Analysis	Recoveries	Non-Human	Skeletal Analysis
